Exact Mirror Settings

Files Present On Destination Side But Missing On Source Side

☑ Delete Files From Destination Side If Not Present In the Source

☐ Delay The Deletion By

| 14 | Days | 0 | Hours | 0 | Minutes |

☐ Specify Different Delay For Older Versions
(if versioning is done by filename encoding):

| 14 | Days | 0 | Hours | 0 | Minutes |

Files Which Are Newer On the Destination Side Than On Source Side

☑ Overwrite Newer Files

Removal Of Deselected Items From Destination

☑ Remove Deselected Subfolders And Files From Destination

☑ Remove Files That Do Not Match the File Masks From Destination

☑ Remove Files That Do Not Match the Filters From Destination

WARNING: DESELECTED / NON-MATCHING FILES WILL BE DELETED!

Please ensure that the destination side is just a copy and does not contain any original files.

ENTER YES TO CONFIRM: YES

Please make sure that you test the implications of your settings thoroughly (in attended mode).

Additional Confirmations In the Profile Are Needed For Unattended Mode.

Real-Time Settings

These settings allow you to fine-tune folder monitoring (Real Time Synchronization).
Since in real time, only current changes are detected, you may want to run the profile
entirely from time to time in order to have the folders be compared completely.

Main | Advanced

☑ Use Real-Time Synchronization

☑ Run profile entirely once, then use Real-Time Synchronization.

    It will be run entirely once each time you start the scheduler, or after a network disconnection.

☑ Process deletions when running in real-time.

    Safety delay for deletions: `10`   minutes (value must be from 0 to 223)

    Deletions will be carried out. Safety settings in the profile are ignored.

    Recommendation: specify folders for deleted files on the tab sheet Files->Deletions.

☑ Process file and folder renames when running in real-time

☑ Ignore certain temporary files in real time
