☑ Detect Moved Files and Renamed Folders - Adjust On: ○ Left ● Right ○ Automatic

☑ Detect Renamed Files (based on timestamp and file size)

☐ Verify copied files (can double execution time) ☐ Re-copy once if verification fails

☐ Automatically resume (copy with temporary filenames, keep incomplete files when stopped)

☐ Do not scan destination - copy all files regardless of their existence at destination
use with caution - possibly with archive filter

Number of files to copy in parallel: 1

Copying Directions

☑ Copy Left To Right   ☐ Copy Right To Left

Include Subfolders

○ None   ◉ All   ○ Selected Folders And Files...

Sync Operation Mode

○ Standard Copying   ○ SmartTracking   ◉ Exact Mirror   ○ Move Files To Destination

Exact Mirror will copy and delete files as needed. On the Configure dialog, you have chosen to delete deselected or non-matching items from the destination! Also see Safety>Unattended.   [Configure...]

Use Recycle Bin For

☐ Overwritten Files

☐ Deleted Files

The Recycle Bin is not always available (e.g., not on network drives). Using the Recycle Bin when overwriting files can be slow and cause it to fill up quickly.

☐ Move Deleted Files Into A Specified Folder...   [Edit Paths...]

☑ Delete Older Versions Permanently (When Doing Versioning Via Filename Encoding)

☐ Double-Check the Non-Existence of Files Before Deleting them on the Other Side

☐ Never Delete Any Files (Only Folders)
